## **DETAILED ACTION**

## Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-20, drawn to a wiring structure, classified in class 257, subclass
   691.
- II. Claims 21-28, drawn to a MOSFET, classified in class 257, subclass 213.
- III. Claims 29-35, drawn to a method of making a device, classified in class438, subclass 190.

The inventions are distinct, each from the other because of the following reasons: Inventions II and I are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as a conductor in any type of semiconductor device such as a bipolar transistor, a diode etc. that does not require the presence of a MOSFET for proper functionality and the MOSFET in group 2 can have a wiring structure and material different from the group I wiring structure and material See MPEP § 806.05(d).

Inventions I,II and III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the gate wiring could have been formed from a

Art Unit: 2826

different materials such as aluminum and a silicon dioxide or other known insulation materials could have replaced the nitride in the claimed method of making a structure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Fetsum Abraham whose telephone number is: 571-272-1911. The examiner can normally be reached on 8:00 - 18:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nathan J Flynn can be reached on 571-272-1915.
